DETAILED ACTION

This Application has been examined. The Preliminary Amendment received 9/26/03 has been fully considered. Claims 9-11 are pending. The examination results are as follows.

Information Disclosure Statement

1. The examiner has considered the documents listed in form PTO-1449 submitted with the Information Disclosure Statement (IDS) received 9/26/03 (see the attached form PTO-1449).

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground, provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 9, 10, and 11 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over the corresponding claims 1, 7, and 7, respectively, of U.S. Patent No. 6,654,007. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present claims 9, 10, and 11 comprise each and every claim elements and limitations defined in the patented claims 1, 7, and 9, respectively.

Allowable Subject Matter

4. Claims 9, 10, and 11 are allowed.
5. The present invention is directed to an optical coordinate input and detection device for optically detecting a position of an input device. Each independent claims 9, 10 and 11 identifies the uniquely distinct features: “a plurality of filters disposed in respective second optical paths in directions perpendicular to directions in which the respective light beams travel, the second optical paths being optical paths through which the respective light beams reflected by said reflective member travel to reach said respective intensity distribution detection units, said filters having transmission rates varying with respect to positions within said filters” (see figures 2 and 11). The closest prior art, the Takekawa et al invention (U.S. Patent No. 6,335,724), and the Sano et al invention (U.S. Patent No. 6,480,187) disclose conventional optical coordinate input and detection devices, either singularly or in combination, fails to anticipate or render the above underlined limitations, which are in combination with other claimed limitations obvious.

Response to Arguments

6. Applicant's arguments, see page 6 of the Preliminary Amendment, filed 9/26/03, with respect to the present claims 9, 10, and 11 in comparison with the allowed independent claims 1, 7, and 9 of the U.S. Patent No. 6,654,007 have been fully considered and are noted.

Conclusion

7. This application is in condition for allowance except for the following formal matters:
The rejection of claims 9, 10, and 11 under the nonstatutory double patenting discussed above.
